Ingenix : CPT Standard 2012 (Current Procedural Terminology (CPT) Standard) before purchasing it in order to gauge whether or not it would be worth my time, and all praised CPT Standard 2012 (Current Procedural Terminology (CPT) Standard):

I'd spend a little more on...By Rachel L Kertz-Barnard I'd spend a little more money on something so vital to coding (especially if you are studying for your certification exam!) and go with the most current professional edition. While I was in classes I wanted to go for the cheaper options, so I bought this Standard Edition. After I saw my classmates' professional edition, though, I wished I would have just spent a little more and bought the Professional edition! The Standard edition is all black and white with no illustrations, while the Professional Edition has color coded sections, tabs, and MANY helpful illustrations with captions that make understanding procedures and medical devices easier. It also helps that the headings of sections are often in color,

because in my standard edition I'd gone through the manual highlighting like crazy. I'm not saying the Standard edition is bad, it's just that the Professional edition is so much better for not much more money. So if you are wanted to get your certification, are a visual learner, or just want the design of your manual to be more helpful, go with the Professional edition. The Standard edition gets the job done, but I'm sure you'd be a more efficient, knowledgeable coder using the Professional edition. 32 of 34 people found the following review helpful. Probably should have gone with the professional edition

My instructors keep adding books that need to be purchased halfway through the quarter so I went with the cheaper version. First, I wanted to save some money. Second because I thought the spiral binding of the professional edition would get caught going in and out of my backpack. However, I like the thumb indexes and color of the professional edition much better. The pages in the standard edition are simmilar to newsprint stock which makes it seem far cheaper than its price would suggest.
